

## Homework Corrections

1. Take your original homework (or a printout of a pdf copy of it) and mark an X next to any untrue statement or incorrect diagram. You do not have to mark any incorrect statements that are correct logical conclusions of earlier incorrect statements.
2. For each X write a brief explanation of why the statement or drawing is incorrect, and (if possible) what would make the statement or drawing correct. Draw a rectangular box around each explanation.
3. Write down any omitted statements or steps necessary to complete the problem correctly. Circle these steps.

If you need extra room to write down explanations or omissions draw a boxed number or letter (for explanations) or a circled number or letter (for omissions) and then write your answers in a clear space or new page with the corresponding number or letter.

4. Submit your homework annotated with explanations and omissions.
