

## Homework 3

Due in Lab Thursday, September 8th.

Reminders: There is major upheaval in lab and class this week. Our Thursday morning class will be at Hal's house and will serve as the prep period for Thursday night's lab. The Thursday night lab will also be at Hal's house and will be a sit down dinner from 7-10pm (no lab during the regular time). Hal's house is at 1490 Annandale Rd and sits on the corner of Annandale and Campus roads. It is the lower level with the glass sliding doors.

To read and hand in:

1. Read the online excerpt of J. Kaufman's *The First 20 Hours*.
2. Review one of your peers' reports on the M & M lab and rate it on a scale of 1-5 for stickiness and a 1-5 scale for credibility. Here 1 means not at all sticky (or credible) and 5 means very sticky (or credible) and the scale is evenly divided between these endpoints. Once you have both my feedback and your peer's feedback you will get a chance to revise your one page report.
3. Week after next we begin the self experiments. Your goal will be to adopt a "lovable" learning project, in Josh Kaufman's words, that you will spend 20 hours working on. In order to help you prepare for these experiments, I want you to start thinking of ideas for this project and what it will entail. Bring three ideas to dinner on Thursday night with one or two sentences laid out about how you would tackle each of these projects. You will hand these in so that I can start to see how I can support the various projects.
