Homework 11
Due by class Monday, March 2nd

1. To turn in: Using our discussion of probabilities from class on Wednesday, Feb 26th, find the probability of getting a total score of 6 when rolling two dice. Report your answer both as a fraction and as a percentage. If you roll three dice, what is the probability of getting a total score of 7? Report your answer both as a fraction and as a percentage. In both cases explain how you got your answers.

2. Read Chs. 1 & 2 of Benedict Carey's book *How We Learn*. (Recall you already read the introduction way back in Hw1. But, if you'd like to reread that, feel free. Also, total pp.∼42, in about 8 sections.) **To turn in:** Close the book and put it away. In your owns words explain what the "power of forgetting" is. A paragraph is fine.
