

## Homework 22

Due by class Wednesday, April 22nd

### Readings:

1. Read Poldrack and Farah's review of the state of direct brain measurements [Progress and challenges in probing the human brain](#). This reading is only 8 pages, but it is, like the Willingham and Lloyd reading, dense.
2. Read Chapter IV of our third and final course text, *Ultralearning*. This Chapter is titled "Principle I Metalearning First Draw a Map" and is about 19 pp.

**To turn in:** There is nothing to turn in for Wednesday. Focus on the reading.
